

R.O.C Patent No. 552,726

Title: Light Emitting Device in use of LED

Summary:

A light emitting device comprises a substrate where a light-emitting element
5 mounted facedown on, a fluorescent composite arranged to face, not in contact with, a
light extraction surface of the light-emitting element, an optical element for receiving
light emitted from the light-emitting element via the fluorescent composite and for
distributing the light received toward the outside of the device. Wherein the
fluorescent composite does not touch the ligh-emitting element, so it will not be
10 affected by heat conduction from the light-emitting element, thus to be prevented from
deterioration caysed by heat.
